

EL Audio SoundWall

The canvas art speaker

INNOVATIVE, SPACE SAVING AND DECORATIVE

Most audio systems are not very aesthetic, take up space and cause unnecessary cable clutter.

We at EL Audio thought, why not simply integrate the audio system into a canvas painting and provide not only the sound but also a beautiful ambience in your own living room.

ONLY THE CANVAS IS VISIBLE!

The SoundWall is a four-centimeter-thick photo canvas in which a fully functional audio system is integrated. It can stream music continuously for up to 24 hours.

The speakers remain completely invisible.

AUDIO QUALITY

You're probably asking yourself: Can a quality audio system be built into a canvas that's only four centimeters thick?

We say: Of course it's possible!

A sophisticated system consisting of a Digital Signal Processor (DSP), a Class D amplifier, two 5 inch full range speakers with a high efficiency, a minimum closed acoustic volume of 4.7 liters and enough damping material ensure good bass and a clear sound!

PRINT QUALITY

The images are printed onto a special sound-permeable acoustic fabric using the sublimation process.

Sublimation printing or transfer printing refers to the printing process in which the dye is vaporized (sublimated) into the carrier material.

Whether it's photos, graphics, illustrations or traditional artwork, thermal sublimation always convinces with a true-to-the-original result.

PRODUCTION

The supervised workshop CIS Freiburg works with people who suffer from physical, mental or sensory disabilities. At CIS we have our SoundWalls produced and we support a local project.

ABOUT US

We are a four-member startup located in Fribourg, Switzerland. We are the creators of the Soundwall which is a product resulting from two years of careful creative designing and planning. The team was able to create this product due to its members being well-rounded in sales, marketing, electronics, digital signal processing and information technologies. As a result, the Soundwall has become a part of many homes today.
